

ANNUAL REPORT

OF THE

INSPECTOR OF BUILDINGS,

For the Year 1884.

THE DEPARTMENT FOR THE SURVEY AND INSPECTION OF BUILDINGS.

Office of the Inspector of Buildings, Old State-House, January 1, 1885.

To the Honorable the City Council of the City of Boston: —

Gentlemen, — In compliance with the provisions of the Statutes under which this department was organized I have the honor to submit a report of the operations of this department for the year ending December 31, 1884. The department has accomplished a vast amount of work during the year, as will be seen by referring to the tables annexed, and in a most thorough and satisfactory manner. The board of inspectors as now organized, owing to a personal familiarity with the many and ofttimes complicated questions constantly arising, are able to adjudicate and settle all such in a most satisfactory and equitable manner, and without great delay.

The experience acquired by continuous terms of office I recognize as the most essential qualification for efficient and acceptable service, and the city is to be congratulated in retaining in this special line of service gentlemen who have this experience, and whose qualifications as master mechanics

or architects are not questioned.

The clerical work of the department, under the direction of the chief clerk, has been performed in a most efficient and satisfactory manner. The department has complied with the order of the City Council, and presented to the Legislature a recodification of the building laws of the city.

This bill has received careful thought and study, and reflects great credit on the good judgment and practicable experience of Messrs. Fox, Caton, Woodbury, and Washburn, who were associated with the inspector as a board of

experts to prepare the same.

It has also received the unqualified endorsement of the Boston Society of Architects, also of the Boston Board of Insurance Underwriters, as represented by Mr. Osborne Howes, Jr., and by a large number of Boston's wealthy gentlemen, who were furnished with a text of the law as recodified.

I herewith submit the following criticism, made by the editor of the American Architect and Building News:—

We have received a copy of the text of the revised Building Act now under consideration in the Massachusetts Legislature, and, although we dislike, as a rule, to comment upon matters pending before the proper authority, we cannot refrain from expressing our sincere hope that the act may pass without modification, and our opinion that in this case the people of Massachusetts will have reason to congratulate themselves on the possession of a building code superior to any in force in the world.

This seems a good deal to say, when one considers the elaborate and excellent provisions of the Parisian and Viennese codes; but we think that most experts will agree with us, that the proposed Massachusetts law, while perfectly adapted to our usual methods of building with light wooden frames, evinces a skill and a familiarity with modern methods, in providing for the protection against fire, by the simplest and cheapest means, of these as well as other forms of construction, which no other building code can show.

which no other building code can show.

This is high praise, but it is deserved; and every citizen of Massachusetts, who is interested in questions of public safety or health, as affected by the proper construction of buildings, should avail himself of

all suitable opportunities to promote the passage of the Act.

If this bill becomes the building law of the city, with its provisions enforced, the future construction of Boston, while it will not cost anything in excess of the methods now adhered to, will be secured against swift destruction by fire. With a fire department as now organized, which is the equal of any other now known, conflagrations from this class of buildings will be most improbable. I would again call the attention of your honorable body to the necessity of including Charlestown in the building limits, and of so extending the present limits as to include the most compact portion of South Boston.

I also take this occasion to return my sincere thanks to the committee of last year for the consideration and atten-

tion they gave to the work of the department.

Under the provisions of the statutes relating to buildings in the City of Boston, and under the provisions of the City Ordinances relating to buildings, the department has supervision over the following matters:—

The erection of brick, stone and iron buildings, under statute

provisions, throughout the entire city limits.

The erection of wooden or frame buildings of limited dimensions and range, outside of the building limits, under the provision of the city ordinance.

Additions, alterations, and repairs on all classes of buildings, with especial reference to their compliance with the

present requirements of the building-law.

The inspection of unsafe buildings and structures, with full power to require the securing or removal of the same, and in cases of immediate danger, where the security of the public is imperilled in life and limb, authority to enter upon, secure, or take down the same, as the exigencies of the public safety, in the opinion of the Inspector, may require.

The examination of buildings damaged by fire or accident, with authority to enter upon the premises and investi-

gate the origin of fires.

The inspection of buildings liable to take fire from unsafe

flues and heating apparatus.

The supervision and the protection of the building limits; the district in which the erection of independent wooden buildings is prohibited by statute law, with a limitation as to wharves.

Special authority invested in the Inspector of Buildings to issue permits for wooden and frame sheds for special purposes, at his discretion, upon wharves situated within

the building limits of the city.

The examination for the approval of plans of proposed tenement-houses, public and family hotels, with reference to their compliance with special statute provisions, regulating area for light and ventilation, material of construction of water-closets, drainage, cesspools, height of habitable rooms, window openings, hall-ways, construction of stairways, fire-escapes, and the height of the buildings as regulated by the width of the street upon which they are proposed to be erected.

The enforcement of statutory provisions requiring fire-escapes upon certain buildings in which operatives are employed, in factories, mills, or manufactories, tenement-houses,

and hotels, etc.

Authority invested in the Inspector of Buildings, under the

Act relating to means of egress from buildings occupied for public purposes, to regulate the entrances, doorways, passage-ways; their width, construction, and number, and obstructions that may be placed therein; the arrangement of the seatings, and the use of combustible materials, draperies, scenery, properties, etc.

The inspection of all hoist-way and elevator openings in buildings, with reference to their construction in conformity with the requirements of statute law and their

use.

Compliance with the requisitions of the Board of Health.

The setting of steam-engines and boilers.

The building of furnaces for melting iron, glass, or other metals.

The building of ovens, kilns, etc.

The setting of heating apparatus in all classes of buildings.

The examination of the grade of cellar bottoms of buildings built upon filled land; reporting violations of the same to the Board of Aldermen.

The storage of combustible material in buildings occupied in whole or in part as dwellings, situated within the build-

ing limits of the city.

Buildings authorized by the Board of Aldermen to be used for stables are licensed to be occupied for this purpose, under the direction of the Inspector of Buildings.

Authority invested in the Inspector of Buildings, by special statute, to prohibit the use of unsafe and dangerous elevators. A notice of said action to be placarded on

the door or entrance of cab or car.

Authority invested in the Inspector of Buildings to regulate the number of watchmen, red lights, gongs, etc., and require any further provisions he may deem necessary for the protection of life in hotels, boarding and lodging houses.

Examination for approval of the construction of bay-windows and other projections over or into the highway, for which the Board of Aldermen may grant permits.

The regulation of plumbing.

The examination of buildings, with reference to their being provided with ample and sufficient means of egress, and their compliance with statute requirements, upon petition for license to occupy the same as a place of public amusement.

Examination of private signs, lanterns, druggists' mortars, etc., located in the public highways, upon a petition to the Board of Aldermen to maintain the same, if secured satisfactory to the Inspector of Buildings.

Authority to apply to the Supreme Judicial Court for an injunction restraining the construction of windows, steps, and porches, projecting into or over any public highway.

The inspection of all steam-boilers, so that the facts and returns relative to them, required to be made, may be returned to the Tax Commissioners.

The projection of electric lights throughout the entire city. The construction, management, and inspection of hoist-ways and elevators throughout the entire city.

The occupancy of streets for building purposes.

Very respectfully,

I am your obedient servant,

JOHN S. DAMRELL,

Inspector of Buildings.

SPECIAL PERMITS.

The provisions of Section 1 of Chapter 260 of the Acts of 1872 prohibit the erection of independent wooden buildings within the boundaries of the district known as the building limits of the City of Boston, with certain exceptions as to wharves.

Wooden additions to existing buildings in this district can, however, be erected with a limitation as to height and area to be covered.

These limits are established by the City Council, under statute authority; and by an ordinance approved July 8, 1871, were defined as follows:—

Beginning at the intersection of the centre line of Dover and Albany streets; thence running eastwardly through the centre of Dover street

to the Harbor Commissioners' line; thence around the northerly portion of the city proper, by the said Harbor Commissioners' line, to a point on Charles river opposite the centre line of Parker street, or crossdam; thence through the centre of Parker street, or crossdam, to a point opposite the centre of Ruggles street; thence through the centre of Ruggles street to the centre of Washington street; thence through the centre of Washington street of Palmer street; thence through the centre of Palmer and Eustis streets to the centre of Hampden street; and thence through the centre of Hampden and Albany streets to the point of beginning.

and Albany streets to the point of beginning.

The said district being shown by a shaded red line on a plan made by the City Surveyor, dated June 26, 1871, and deposited in the office

of the City Surveyor.

The above ordinance, establishing the boundaries of the building limits, was amended April 6, 1878, by striking out after the words, "to a point on Charles river opposite the centre line of," the words "Parker street or cross-dam," and inserting in their place the words "West Chester Park as extended; thence through the centre of West Chester Park to its intersection with Boylston-street extension; thence through the centre of Boylston-street extension to the centre of Park street;" and after the words, "dated June 26, 1871," insert the words, "as amended as shown by a shaded blue line on said plan."

Dec. 31, 1881, the following was passed:—

AN ORDINANCE TO AMEND AN ORDINANCE IN RELATION TO THE REGULATION AND INSPECTION OF BUILDINGS.

Be it ordained by the Aldermen and Common Council of the City of Boston in City Council assembled, as follows:—

SECTION 1. Section 1 of an ordinance in relation to the regulation and inspection of buildings, passed July 8, 1871, and amended April 6, 1878, is hereby repealed, and the following enacted in place thereof:—

SECTION 1. The limits within which all buildings hereafter erected shall be required to conform to the provisions of Chapter 280 of the year eighteen hundred and seventy-one are hereby established and defined

as follows:—

Beginning at the intersection of the centre line of Dover and Albany streets; thence running eastwardly through the centre of Dover street to the Harbor Commissioners' line; thence around the northerly portion of the city proper, by the said Harbor Commissioners' line, to a point on Charles river at the intersection of said line with a boundary line between Brookline and Boston; thence along said boundary line to a point opposite the centre of Longwood avenue; eastwardly to the centre of Bumstead lane; thence through the centre of Bumstead lane to the centre of Ward street; thence through the centre of Parker street to Ruggles street; thence through the centre of Ruggles street, eastwardly, to the centre of Washington street; thence

through the centre of Washington street to a point opposite the centre of Palmer street; thence through the centre of Palmer and Eustis streets to the centre of Hampden street; and thence through the centre of Hampden and Albany streets to the point of beginning.

The said district being shown by a shaded red line on a plan made

by the City Surveyor, dated June 28, 1881, and deposited in the office

of the City Surveyor.

STEAM-ENGINES, BOILERS, OVENS, AND FURNACES.

Under the provisions of Section 18 of Chapter 371 of the Acts of 1872 this department has supervision of the setting of all steam-boilers and heating apparatus, and the building of ovens, furnaces, etc.

The prosecution of this work does not, however, involve an inspection of the boilers, with a view to ascertain their condition and safety, and, though frequently called to act for that purpose, it has no legal authority.

STEAM-ENGINES, BOILERS, FURNACES, ETC.
